Brother printer software dcp-j100

MFC printers complete several document preparation functions, including printing, scanning and faxing, but may not include a wireless adapter. If your MFC printer is not wireless, that does not necessarily mean that you cannot perform wireless printing with it. As long as you can connect your MFC printer to your wireless router, you can give your printer access to your wireless network. Any computer on your wireless network can then use the printer for wireless printing. Connect the Ethernet port of the MFC printer to one of the Ethernet ports of your wireless router. Verify that the Internet modem, the wireless router and the MFC printer are all powered on. Open your computer's Start Menu by clicking the "Start" button on the taskbar. Click "Devices and Printers." Click "Add a Printer" at the top of the screen. Select the second option to install a wireless or network printer. Highlight your MFC printer from the list of printers your computer detects within range. Click "Next." Install the print drivers associated with the MFC printer. Insert the installation CD that came with the MFC printer if prompted. Give your computer permission to search for the drivers online if you do not have the installation CD. Click "Next" when you receive the confirmation message that the computer installed the drivers separately. Type in the name you want to associate with your MFC printer in the space provided. Click "Next." Choose whether to share your printer with others on a network. Click "Next." Choose whether you want the MFC printer to be your default printer on your computer. Click "Finish." Tips It does not matter which Ethernet port you use to connect your printer to your wireless router as long as you do not use the first port. The first port is usually reserved for your Internet modem. Warnings This procedure may vary depending on the model of your MFC printer or the model of your wireless router. Consult your user manuals or contact the equipment manufacturers for technical support. By Tiffany Garden Many models of Brother printers have network adapters installed. Instead of connecting the printer directly to your computer, you can connect the Brother printer to your router and use it as a network resource. This setup is advantageous when you want to use the printer from multiple computers in your house or if all of your computers are laptops and you don't want to bother with connecting and disconnecting the printer as you move from room to room. Insert the Brother printer installation CD. Choose to install BRAdmin and the drivers. Click "Next" on each installation wizard window until you reach the end of this process. Plug in your Brother printer. Wait for it to power up completely; then connect the Brother's Ethernet cable into one of your router's wired devices or printer-specific ports. Go to the computer you installed the Brother software and drivers on. Go to "Start" and click "Control Panel." Choose "Printers and Faxes." Click "Add a Printer." Click "Next." Choose "A network printer, or printer attached to another computer." Click "Next." Choose "Browse for a printer." Leave the text field blank and click "Next." Select the Brother printer in the list of printers that appears on the next page. Click "Next." Choose "Yes" or "No" to select the default printer status. Click "Next" then "Finish." Digital Trends may earn a commission when you buy through links on our site. If you're putting together a new home office, either because of the need to self-isolate due to the novel coronavirus (also known as COVID-19) or simply because you're working from home more often, you need to have a printer. Printers might not be in as much demand as they once were, thanks to the rise of digital contracts and documents, but they're useful to have. Generally, when someone requires you to print something, they really need you to print it. Fortunately, a good home office printer doesn't have to cost a fortune with plenty of great printer deals out there. We've looked more closely at two great options currently on sale that are perfect for the average home office. Epson Expression Home XP-4100 Wireless Inkjet Printer — \$50, was \$100 Best Buy The ideal fit for most home offices, the Epson Expression Home XP-4100 Wireless All-In-One Inkjet Printer is low in price but offers plenty of features. It'll print up to 10 pages per minute in black or up to 5 pages per minute in color with its four bundled Epson 212 Claria ink cartridges offering up to a 150-page yield in black and up to a 130-page yield in color. It supports up to 5,760 x 1,440 dpi print resolution, ideal for high resolution printouts such as photos as well as regular documents. It also has scanning support so you can easily scan documents straight to your PC or to an email, as well as send quick faxes. When it comes to cool optional extras, the Epson Expression Home XP-4100 Wireless All-In-One Inkjet Printer continues its strong run of features with voice-activated printing, Apple AirPrint capabilities, tablet and smartphone based printing, and a clear 2.4-inch LCD screen. Simply put, the Epson Expression Home XP-4100 Wireless All-In-One Inkjet Printer is a great all-rounder for most home offices. It's currently priced at \$50 at Best Buy — a price cut of \$50, so it's a bargain. Brother HL-L2350DW Compact Monochrome Laser Printer — \$90, was \$120 If you need to print a high volume of documents, you need a laser printer both for speed and value for money. The Brother HL-L2350DW Compact Monochrome Laser Printer is a great bet and it's only \$90 right now at Amazon. It's able to print up to 32 pages per minute with a sheet paper capacity of 250 so you won't have to refill the tray too often. It also offers automatic duplex printing enabling it to print on both sides just as easily as on one side. As its name suggests, it's only a black and white printer but if you solely need to print documents for work, this won't be an issue. Its sheer ability to print so fast is the big advantage here but the Brother HL-L2350DW Compact Monochrome Laser Printer is also wireless and works just as well at dealing with print jobs from your smartphone or tablet, as it does with your PC or Mac. Buy from Amazon, and because it has Amazon Dash Replenishment enabled, too, it will order more toner the moment you run low. For business purposes, the Brother HL-L2350DW Compact Monochrome Laser Printer is an ideal stress-free acquisition for your home office. We strive to help our readers find the best deals on quality products and services, and we choose what we cover carefully and independently. The prices, details, and availability of the products and deals in this post may be subject to change at anytime. Be sure to check that they are still in effect before making a purchase.Digital Trends may earn commission on products purchased through our links, which supports the work we do for our readers. Editors' Recommendations Photograph: Rick Rizner No matter how digital our lives become, printers remain essential in any office and convenient at home for schoolwork, maps, fliers, and photos. PC World tests and reviews three types of printers—inkjets, color lasers, and snapshot models—on an ongoing basis. We also regularly test multifunction printers, both inkjet and laser. No matter which kind of printer you're looking for, here's the information you need to make a well-informed purchase. The Big Picture From inexpensive snapshot units and inkjets to high-end color lasers, printers are designed to do different jobs. Here's how they stack up, feature by feature. more In Video: Choosing a Printer in Six Simple Steps Key Specs Explained We unravel the mysteries of print speed, print quality, cost of ownership, and maximum resolution—and tell you which specs are really important. more Printer Shopping Tips Whether you want an inkjet to print documents and newsletters at home, a snapshot printer to output photos and postcards, or a laser printer to take care of the needs of your whole office, we have recommendations to make your purchase easier. more 1 What Is the Capital City of Hong Kong? 2 Did Martin Luther King Have Any Brothers or Sisters? 3 Why Is the United States Postal Service in So Much Debt? 4 Common Characteristics of Successful Organizations 5 What Does "cc" Stand for in Medical Terms? It seems like every household has a printer. If you do not have one then you know of someone who does. Having a printer is a great amenity learning how to use one for the first time can be somewhat of a challenge. Once you learn how to use it all of the different models become easy, and there are so many things you can do with them. Using a printer even a basic printer is extremely easy to do. There are many different models of printers out there. You have your very basic to your all-in-one printer. The printer with everything on it works pretty much just like the regular printer you just have a lot more buttons to push. Make sure that your printer is hooked up properly before using it. If this is a brand new printer then it will go through a check and print out a test page for you. A lot of different times you can just turn it on, you will hear the ink moving around. Something might come up on the computer telling you that the printer is on and working properly. Open the page you want to print. If you are on the Internet and want to print something from there. All you have to do is go up to file, then down to page set up. This will give you more printing options to choose from. When you are done setting up the page you can verify you have the right printer hooked up by clicking on "Printer" at the bottom. Once everything looks good click on "OK" and now your page should print out. Open up a ".doc" file if that is where your page is that you need to print. When you are ready to print go up to "File" and "Print Setup". Again you can choose how you want your page to look, and check and make sure the right printer is installed. If your page is set up the way you like it you can just click on the printer icon on the tool bar or go to "File" then "Print." Using a printer a lot over time will start to wear down your ink supply. Some models of printers let you know when your ink supply is getting low. If you have an older printer you will just have to go by what the printed page looks like. If it is very worn and faded then it is time to install a new ink cartridge. Read all instructions that come with your printer so you can properly use it. free download software printer brother dcp-j100
